

Sycurio.Voice

PCI DSS compliant contact center phone payments

Delivering secure, connected customer experiences

Balancing customer experience, data security and agent engagement are at the heart of our vision. At Sycurio we understand that creating powerful customer connections, with high levels of customer satisfaction and security are at the top of the priority list for most contact centers. We enable organizations to deliver trusted and connected experiences for their customers – especially where payment transactions are involved, or sensitive personal data is exchanged.

Simple, secure & PCI DSS compliant telephone payments wherever your agents are located.

Sycurio.Voice lowers costs, boosts contact center productivity and staff performance and simplifies Payment Card Industry Data Security Standards (PCI DSS) compliance for card-not-present (CNP) payment transactions.

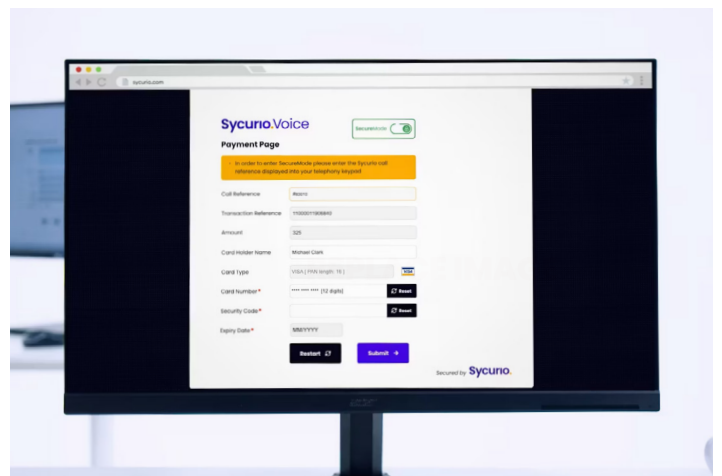

Sycurio's certified and globally trusted solution protects your customers' payment card data when you take payments over the phone. Our patented data capture methods mask the sounds made by the key tones (Dual-Tone Multi Frequency or 'DTMF'), this ensures agents don't hear or see any payment card data and can continue to stay in contact with the customer throughout the entire call.

Sycurio.Voice lowers costs, boosts contact center productivity and staff performance, and makes it easier to keep your organization compliant

The secured card data is sent directly through Sycurio's secure infrastructure to your payment service provider (PSP) for processing, ensuring your customers' sensitive information never enters your business environment. Using this approach means that your agents and organization are no longer in scope for PCI DSS and your data security risks are radically lowered.

Sycurio.Voice delivers significant additional benefits such as lower management costs, reduced call handling times, improved first contact resolution, increases in customer satisfaction and improved trust levels.

Flexible & secure payment CX.

Take your contact center out of PCI DSS scope

By eliminating any need for your organization to store, process or transmit cardholder data, Sycurio.Voice removes the regulatory burden of PCI DSS compliance. Enabling your sales and customer service teams to deliver a smooth and consistent payment experience for every customer – one that protects both you and them.

- Patented data capture method, using market-leading DTMF masking protects payment card data and shields it from agents
- Sensitive payment data is automatically excluded from call recordings, is never stored in your contact center systems and remains out of your IT/telephony infrastructure, including your VoIP networks
- Agents stay in full contact with customers throughout the entire call, improving customer satisfaction and reducing the number of abandoned calls
- Speech recognition provides a secure alternative for customers unable to use the telephone keypad to share their payment information
- Agents receive confirmation once the payment successfully completes
- Fully compatible with Sycurio.Digital our flexible omni-channel payments solution for chat, SMS, email, chatbot and e-commerce solutions

Deliver better CX - serving customers faster and more efficiently

Sycurio.Voice was created for contact centers and sales support teams that need to deliver exceptional customer service. Flexible and intuitive payment interfaces make it easy to transact fluidly in the most demanding use cases.

Sycurio's solutions enable taking PCI DSS compliant payments over the phone and through your other contact channels quick, simple, and secure:

- Payment pages are instantly delivered and can be pre-populated with key customer information (name, address, transaction amount and currency)

- Automatic validation of all data prior to payment ensures transactions are processed with minimal delay
- Customer records can be automatically updated when a payment transaction completes
- Enables your people to securely take payments from home and remote locations - increasing business flexibility and operational resilience

Sycurio.Voice at a glance

- Moves your entire contact center and remote agents out of scope for the majority of PCI DSS compliance obligations
- Significantly reduces PCI DSS compliance costs and reporting burden
- Patented market-leading data capture method using DTMF masking
